

LIGHT- and TEMPERATURE SENSOR

SYSTEM DESCRIPTION

The wireless light and temperature sensor constantly reports the ambient conditions in your technical installations. The sensor continuously measures (every 50-70 seconds) the light and temperature and reports immediately when significant changes occur. Manual registrations can be done with a contactless activation key.

By simultaneously measuring two parameters, the need for two individual sensors is avoided. Factory calibrated and sealed upon delivery. Service and calibration for HACCP, according to SS-EN 13486 are available as optional services.

LIGHT- and TEMPERATURE SENSOR

PRODUCT SPECIFICATION

TECHNICAL SPECIFICATION

Measured value (Light) 0 till 1000 Lux

0 till 100 fc (1fc = 10,76 Lux)

Measured value (Temperature) -40°C till +100°C

Inaccuracy 0,2°C
Resolution 0,1°C
Protection IP54
IP68

PHYSICAL DIMENSION

Size 78 x 116 x 140 mm

Weight 156 gram

Display 15 x 35 mm (3-digit LED)

TECHNOLOGY

Durable surface-mounted electronics (SMD)
Microprocessor based
Compatible with WCS Radio PLC®
License-free low-power radio data transmission
Undisturbed and error controlled
Integrated battery with lifespan 11-15 years

ACCESSORIES

Magnetic attachment Art.no: 918
Universal mount Art.no: 939
Transparent Lexan mount Art.no: 907
(All with easy click-attachment)

MANEUVER

With patented non-contact activation key measurement can be viewed and reported wirelessly in addition to the continuous automatic journaling. Blue LED indicates radio transmission of an automatic or manual report.
